WEBWAY MANAGED ALARM TRANSMISSION SERVICES

WebWay

IP/GPRS for home security

Reduce costs, not security

Switch to digital savings

WebWay IP/GPRS LPS I&HAS ATS5 (hereafter referred to as WebWay IP/GPRS) connects your security systems to your shared broadband line for fast, secure and reliable alarm transmission, servicing and diagnostics. Your WebWay saves you the cost (£166 plus per annum) of a dedicated phone line for alarms, does not incur call charges and is monitored continuously for maximum uptime and security.

Secure and reliable

WebWayOne provides the most robust signalling solution in the UK. Our systems use dual path encrypted communications, signalling over fixed line private or public broadband connections and Telefonica's network of over 13,000 GSM/GPRS base stations. Where signal strength is low we provide antenna upgrades and roaming SIM options at no additional annual charge.

Every path of every system is checked for operation more than 140,000 times per week. Polling and alarms are sent directly from the Alarm System to the Alarm Receiving Centre with no intermediate host for the highest reliability, resilience and security.

All faults can be remotely diagnosed for a first visit or remote fix. Alarm panels can be serviced over the network for improved reliability and efficiency.
